Which is right in the middle of a large congestion Zone, which on its own, should act as a support band. Long Term Investors should not flee in Panic, if we hold this support area, and would present a perfect area for Traders to pick up Low Risk Opportunities.

In Summary

A New Bull Market for the TSX would start with a Monthly close above 10,750. Unfortunately, this is also where weekly Resistance is at its strongest.

Investors should remain bullish on the Canadian Stock as long as we do not close below 8,900 on a Weekly basis.

Traders should remain Bullish as long as the TSX does not close below 9,225.

And Day Traders should remain Bullish as long as as the TSX does not start trading below 9,300 intra day.

That is all for this week.
